Design and Prototyping Services

Plan

Whether you have drawings, an early stage prototype, or even completed files we will set up a meeting to go over the full scope of your project addressing your goals and concerns to create a project plan suitable for you. The privacy and safety of your ideas are of the utmost importance to us and we are always happy to sign an NDA.

Design

We use CAD programs, drafting software, hand calipers, 3D scanners, and other tools to translate your idea into a digital format. We provide updates during the design process to keep you informed about progress and to ensure things are coming along as you expected.

Iterate

We use an online 3D viewing portal as well as images and test prints to ensure you have all of the resources needed for an in-depth review of our work. We rely on collaboration and communication with each client to validate their project before moving onto further revisions or production. Each project has varying complexity and each order can require several revision cycles to ensure client satisfaction.

Produce

We offer in-house prototyping services including 3D printing in a wide range of materials, incorporating existing hardware, and even low volume silicone casting. We're able to export filetypes compatible with all manufacturing techniques to enable the volume and type of production that you need. We're thrilled to see our clients' products appear for sale on websites, used in research, and sold in stores.
